Training regression-risk matrix used by R4

R0–R3 pooled training evidence | Candidate repairs | 29/90 off-diagonal pairs observed; 7 non-zero

Affected family (passing before repair)

Regression probability (0–1): 1.0, 0.8, 0.6, 0.4, 0.2, 0.0

Cell: regression probability; smaller text: regressions / eligible attempts.

N/A = no measured probability — = structural diagonal 0.000 = no observed regressions in eligible attempts

Small samples: Trip specification → Monetary budget (1/1); Accommodation → Commonsense repair (2/2) each come from one query.
